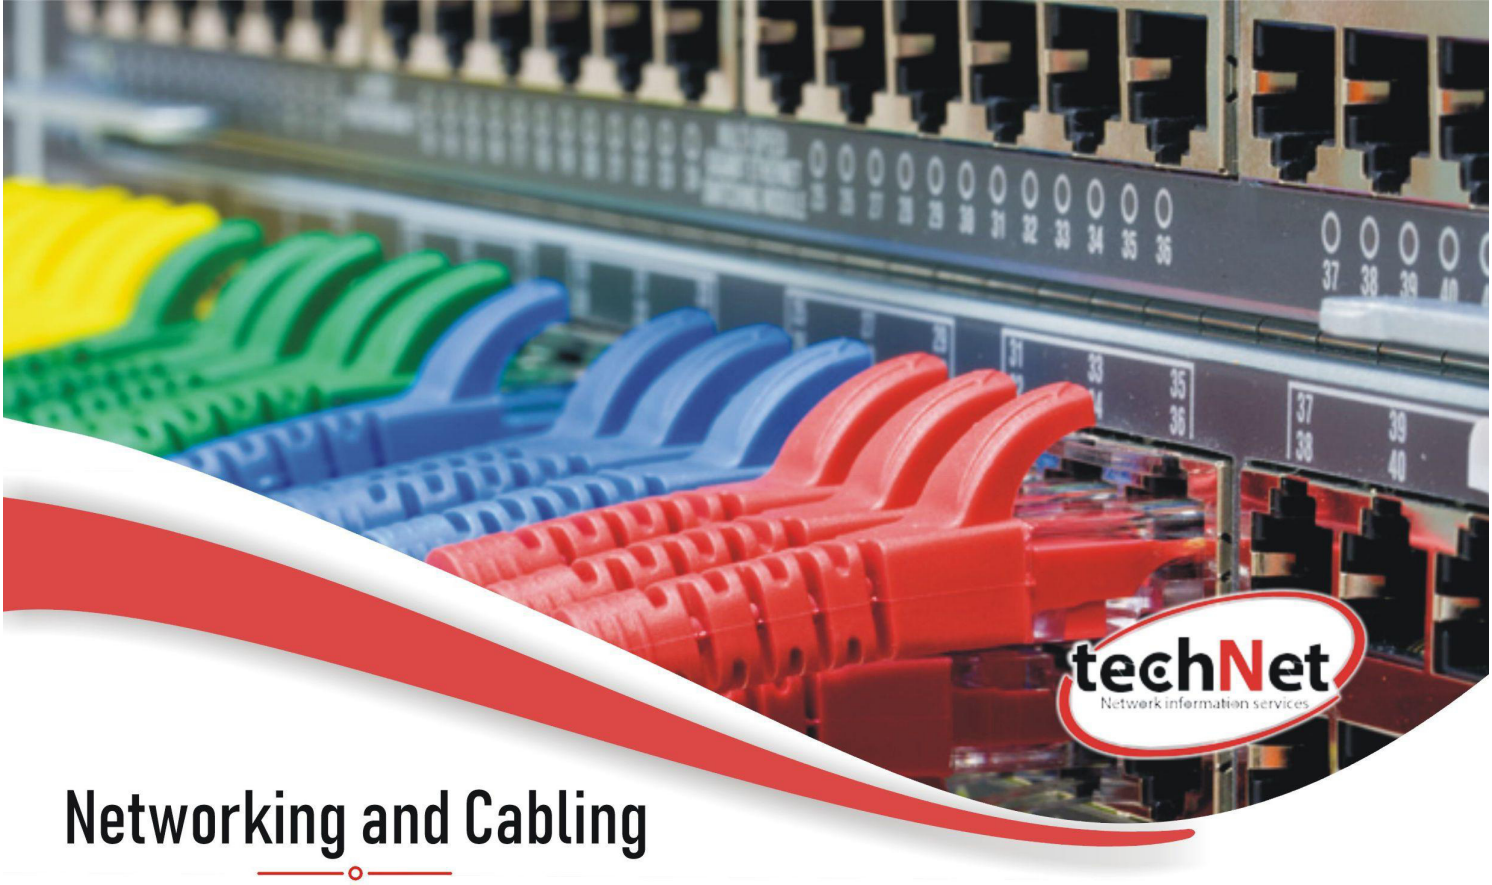
To provide unparalleled security and facilities management solutions to global clients by acquiring specialized knowledge, acquisition and retention

Quality

We are passionate about our customers and put each customer first in every work what we do. It is our standards that enable our customers to feel totally secure.



Networking and Cabling

Network cables are used to connect and transfer data and information between computers, routers, switches and storage area networks . These cables are essentially the carrier or media through which data flows. There are different types of communications cables, and the appropriate type to use will depend on the structure and topology of the overall architecture of the system.
TECHNET provide all kind of networking for office , building, underground etc.

All kind of Cabling, Fiber optic cable , Cat6 cable, FTP cable, UTP cable , under ground cable
PABX cable, Internet cable, Etisalat cable etc

Wireless Networking Installation

Access Control and Security Devices

Access control is a security technique that regulates who or what can view or use resources in a computing environment. It is a fundamental concept in security that minimizes risk to the business or organization.
